

IC1000

REMOTE COOLING SYSTEM

- ✓ 60 Litre Storage
- ✓ Stainless Steel Reservoir
- ✓ Cools 120 Litres per Hour
- ✓ Services up to 6 outlets
- ✓ Heavy Duty construction
- ✓ Designed and built in Australia
- ✓ Superior Insulation and Energy Efficiency
- ✓ 12 Month Comprehensive Wholesale Warranty
- ✓ Ideal for Schools, Mines, Sports Facilities, Dining Halls and any other High Demand applications

IC1000 REMOTE COOLING SYSTEM

GENERAL INFORMATION

The Waterworks IC1000 water cooling system provides enough cold water to cope with the most extreme periods of high demand. The combination of high cooling performance, & a huge volume of stored cold water, make the IC1000 ideal for many applications such as schools, mines, sporting venues, public areas & construction sites.

The IC1000 is a remote cooling system, meaning it can be installed in-line, just prior to your choice of tapware. These units can be used for most applications, whether it be a 6 bubbler trough at a school or a high volume single faucet.

COOLING SYSTEM

The cooling system of the Waterworks IC1000 utilises industry leading technology. The hermetically sealed, dynamic condensing unit features superior insulation which prevents heat gain, therefore increasing energy efficiency. The sealed unit contains 330 grams of ozone friendly R134A refrigerant.

COOLING SYSTEM

The universal design of the IC1000 water cooler allows for easy installation. A 1.2 metre cord set with 3 pin plug is included & can be connected to any Australian Standard 240V 50Hz single phase power outlet.

Plumbing connections (inlet & outlet) are both 1/2" male BSP thread fittings.

Ensure the IC1000 is installed upright on a flat stable surface, in an area protected from the elements. Adequate ventilation and access to the service panel is essential.

MODEL	IC1000
DESCRIPTION	REMOTE CHILLER
TANK VOLUME	60 LITRES
LITRES P/H	120 LITRES P/H
OUTLETS	UP TO 6
PACKED WEIGHT	64KG
DIMENSIONS	510W 510D 965H
WEIGHT	59KG

Typical installation of IC100 with bubbler trough.
